For use with the SnowEx V-Maxx 8500 Spreader

ACCUSPRAY Liquid De-Icing System

ACCUSPRAY is a complete, self-contained liquid de-icing system that is capable of de-icing or pre-wetting. It is two systems built into one –

- Directly apply de-icing products to the pavement . . . DE-ICING
 - Directly apply de-icing products to bulk material like sand or salt . . . PRE-WET
- Either way it's just a turn of a valve.

FEATURES

- Adaptable to most salting/sanding equipment
- State-of-the-art digital control
- Selectable de-ice or pre-wet operation for use with most liquid de-ice and pre-wet products
- Dual rotary three-position spray nozzles for either high-flow streamer, low-flow streamer, or wide fan spray for direct application to the pavement
- Single wide fan spray nozzle located at discharge chute for direct application to bulk material
- All nozzles made of high quality stainless steel to reduce clogging
- 75 Gallon tank capacity that is expandable to 225 gallon capacity or 375 gallon capacity by adding 2 or 4 seventy-five gallon saddle tanks on either side of the spreader
- 12 Volt dual head hi-flow pump with hydrostatic equalizer tube to minimize pump load
- Full vehicle harness with weather-proof automotive quality connectors
- Minimal assembly and installation time
